Company: One Source

Hydrogeologist for Casper, Wyoming – immediate need for applicants with 5 yrs + experience.

A well known innovative and forward thinking energy company is seeking a Hydrogeologist to work closely with a Wyoming team in the Powder River Basin.

Here is an overview of the position: Responsible for understanding groundwater systems in PRB. The work will contribute significantly to environmental impact studies and experience with modeling of groundwater flow and contaminant migration is essential. Experience drilling and testing of water wells (piezometers).

We are looking for someone with a min. of 5 years experience as a Hydrogeologist, ideally in a consulting role in the coal industry. Experience in groundwater drilling supervision and understanding water well construction and aquifer testing methods is required. Must have CBM or UCG experience. Comfortable managing drilling contractors. Experience in drilling and testing of water wells/piezometers. We also require experience in contaminant hydrogeochemistry and groundwater remediation, flow modeling using relevant software, research and report writing, and coal or CSG related hydrogeology experience desirable.

Resumes should be submitted as soon as possible to claudia@onessi.com. Pay rate has not been determined. Please include pay expectations.
