

[Announcement](#) | [Brochure](#) | [Presentation](#)

A presentation was made from John Choma of Energy Connect. The gist of the presentation is that users of large amounts of electricity can get paid for reducing their electrical demand during peak times during the summer. The logic is that this is less expensive than bringing the more expensive power plants on line to meet the demand.

Also presented were energy efficiency efforts at Scranton Army Ammunition Plant and Tobyhanna Army Depot.
