

**Eastern Section Event- Breakfast Learning Session
Wednesday June 12, 2019 7:30 AM -8:30AM
Office of RK&K**

The Pennsylvania Association of Environmental Professionals (PAEP) invites you to the following breakfast event sponsored by RK&K and Urban Engineers:

**Streamlining the Beneficial Reuse of Regulated Fill for
Transportation Projects**

Under their Strategic Recycling Program (SRP), PennDOT seeks to: 1) reduce the waste they generate through operations, and 2) identify and use recycled or recyclable materials in projects where there is an engineering and/or cost advantage. PennDOT is the largest consumer of raw materials in the Commonwealth. Further, if you consider contaminated soil and construction-generated materials, they are one of the largest producers of waste. Under the SRP, PennDOT looks for opportunities to use construction-generated asphalt and concrete as well as a host of non-recycled recyclables such as glass cullet, tires, shingles, ash, slag, compost, and plastics. Working with PADEP, one of PennDOT's current initiatives is to encourage the use of Regulated Fill in transportation projects. Specifically, working in concert with PADEP, we are streamlining the approval process for Regulated Fill transfer and use between two transportation improvement projects. This presentation will provide an overview of the SRP and describe the streamline Regulated Fill process that could be in place for the fall construction season. Jeffrey C. Obrecht, PG, Manager of Environmental Health & Safety Services at RK&K, will be presenting information on this innovative topic.

**FREE for PAEP Members; \$5 non-members
Breakfast will be provided**

We are sorry but space is limited to 25 people!

Payment/registration accepted on the PAEP website: www.paep.org
